Endolive® Rome returns both in presence and in streaming after a year of interruption due to the coronavirus pandemic and another year only in streaming. The traditional Workshop, organized at the Auditorium of the Catholic University here in Rome, will, as always, propose the live transmission of a wide range of diagnostic and therapeutic endoscopic cases performed by a "stellar" International Faculty. In the afternoon of the first day, a very important topic will be addressed: Training in Digestive Endoscopy. The suggestions of the European Society (ESGE) and the experiences of the South American and Indian realities will be presented. A lecture by Jacques Marescaux, President of the IRCAD in Strasbourg and extraordinary innovator, will then take us into the future of minimally invasive image-guided therapies.

In the diagnostic field, there is no doubt that the most interesting and innovative recent novelty is the application of Artificial Intelligence in the recognition and characterization of colonic polyps. By now all the most important endoscope manufacturers have equipped themselves with this technology that allows to identify, by signaling them in real time, on the television screen, a significantly greater number of colonic polyps and therefore to improve our ability, by removing them, to prevent colorectal cancer.

Live demonstrations of endoscopic resection techniques of superficial lesions of the esophagus, stomach, duodenum and colorectal, of minimally invasive treatment of motor disorders of the esophagus such as achalasia, Zenker's diverticula and epiphrenic esophageal diverticula, of bariatric endoscopy for morbid obesity, endoscopic treatment of complex bilio-pancreatic diseases in a new hyper-technological hybrid room and many other sophisticated diagnostic-therapeutic procedures will constitute the backbone of the event.

We look forward to welcoming you in presence and in streaming!

Patient advocate:

Dr. Emilio Di Giulio

As suggested by ESGE guidelines patients are represented by an endoscopist, the patient advocate, who does not belong to the local organizing committee (LOC) and who will report to the director of the LOC. He has no conflicts of interest with the director of the LOC, local staff or visiting faculty members. The patient advocate will give general feedback to the director of the LOC in a written proforma report including all the potential or actual breaches of the ESGE recommendations or any other action that may have exposed patients to an increased risk related to the LEE.
